

Today's Wood Preservatives Panel Penta

Jason Council

Vice President & General Manager, Wood Treatment
KMG Chemicals

Pentachlorophenol, or Penta, has been used as a wood preservative for utility poles since the 1940s. As one of the more popular preservatives in utility use, more than half the wood poles and crossarms produced in the U.S. are treated with Penta.

About Jason

Jason Council is new to the Wood Treatment industry, starting on May 1, 2019 as the VP and GM of KMG's Wood Treatment business manufacturing pentachlorophenol. Jason comes from the oil and gas industry with over 20 years of experience running private and public businesses. He is a graduate of Texas A&M University and based in Houston, Texas.
